1. Apply rubber bumpers to support glass or marble top: three bumpers on side table or five bumpers on coffee table evenly spaced around perimeter and width of frame, as shown.

Side Table

Coffee Table

2. Stone top is especially subject to breaking if carried in a horizontal orientation, and, to a lesser degree, glass as well. When moving, always make sure to tip vertically and handle with extraordinary care. When setting top down, lay flat on a padded surface – do not lean against another object.

3. Before placing table base in its final location, apply optional felt pads to bottom of leveling feet. Position base without top near final location. Unpack top and gently lower onto base, being careful not to drop abruptly. Reach under table with one or two hands as necessary to support top and ease gently down into place from below. A second person should steady table to prevent tipping.

Stone Care

Wipe up spills immediately. If neglected, spills of wine, coffee, ketchup, oils and acidic substances such as vinegar and citrus juice can discolor marble. Clean regularly with a soft cloth dampened with a solution of mild detergent and warm water. Never use solvents, window cleaner, household cleaners, or abrasives of any kind. Apply a stone sealer once a year to help protect finish.

Glass Care

Dust with a damp cloth and clean occasionally with any good quality glass cleaner and a soft cloth. Never use abrasives or solvents of any kind.

Wood Care

Regularly dust wood portions of table with a damp soft cloth. Clean occasionally with a soft cloth dampened with a solution of mild detergent and lukewarm water.
